array can detect changes in expression in a large number of genes coding for different signaling pathway populations which can be used to diagnose various diseases including cancer e.g. adenocarcinoma and leukaemia, immunopathies e.g. AlDS and acthma, neuropathies e.g. Alzheimer's disease and Parkinson's disease. The present sequence represents a polynucleotide form part of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a combination which, comprises a number of polynuclectide probes comprising a sequence selected from one of the 1490 sequences mentioned in the specification. The combination is useful as an array element in a microarray for monitoring the expression of a number of target polynucleotides. The microarray is particularly useful in the diagnostias and treatment of cancer and immunopathology and neuropathology. The microarray is useful in diagnostics and treatment regimens, drug discovery and development, toxicological and carcinogenicity studies, monitoring progression of diseases and for developing sophisticated profiles for the effects of currently available therapeutic drugs. The combination is also useful for purifying a subpopulation of mRNAs, cDNAs

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  comprising first polymerication of a gene encoding a transducing gene encoding a receptor-like polypeptide, second polymelocide probes comprising at least a portion of a gene encoding a transducing polypeptide and third polymelecide probes comprising at least a portion of a gene encoding at least a portion of a gene encoding an effector-like polypeptide. The probes of the composition are useful as array elements in a microarray for monitoring the expression of target polymelecides. The microarray is useful in the diagnosis and treatment of cancer, an immunopathology or a development, toxicological and carcinogenicity studies, forensics or pharmacogenomics. Microarrays can also be used for drug discovery and development, toxicological and carcinogenicity studies, forensics or pharmacogenomics. Microarrays can also be used for monitoring the progression of diseases that may be associated with the altered expression of signalling pathway polypeptides. The composition can also be used to purify a subpopulation of mRNAs, cDNAs, or genomic fragaments in a sample. The expression profile is also useful for the diagnosis and treatment of cancer, e.g. cancers of the adrenal gland, bladder, bone, bone marrow, brain, breast or cervix, an immunopathology, e.g. AIDS, diabetes, pancreatitis, osteoporosis or ulcerative colitis, or a neuropathology, e.g. dementia, amnesia,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                895 TITLE OF INVENTION: MAMMALIAN MEMBRANE PROTEIN GENES; RELATED REAGENTS
TILE REPERENCE: SP0695B
CURRENT FILICATION NUMBER: US/09/862,802
CURRENT FILING DATE: 2002-01-10
PRIOR APPLICATION NUMBER: US 09/111,470
PRIOR PILING DATE: 1996-07-08
NUMBER OF SEQ ID NOS: 11
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Length 1458;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 FEATURE:
COTHER INFORMATION: mammalian nucleic acid
NAME/KEY: CDS
LOCATION: 257...1204
OTHER INFORMATION: protein coding sequence
NAME/KEY: variation
LOCATION: 608...673
COCATION: Short form lacks these nucleotides

                                                                                                              -!- MISCELLANEOUS: Calcium is required for ligand binding.
-!- MISCELLANEOUS: Two types of rat hepatic lectin have been
identified, RHL-1 and RHL-2/3, having a relative abundance of 4:1.
-!- SIMILARITY: Contains 1 C-type lectin family domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   2 TRIYENFQYLENKVKVQGFKNGPLPLQSLLQRLRSGPCHLLLSLGLGLLLLVIICVVGFQ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                     SUBUNIT: Interacts with LASS2 (By similarity).
SUBCELLULAR LOCATION: Type II membrane protein.
TISSUE SPECIFICITY: Expressed exclusively in hepatic parenchymal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        By similarity.

Gene 148:237-244(1994).
-!- FUNCTION: Mediates the endocytosis of plasma glycoproteins to
which the terminal stalic acid residue on their complex
carbohydrate moieties has been removed. The receptor recognizes
terminal galactose and N-acetylgalactosamine units. After ligand
binding to the receptor, the resulting complex is internalized and
transported to a sorting organalle, where receptor and ligand are
disassociated. The receptor then returns to the cell membrane
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     PROSITE; PS00615; C_TYPE_LECTIN 1; 1.

for galactose/N-acetyl-galactosamine from tumoricidal macrophages.";

J. Biochem. 104:600-605(1988).

-! FUNCTION: Recognizes terminal galactose and N-acetylgalactosamine units. May participate in the interaction between tumoricidal macrophages and tumor cells.

-! SUBGINIT: Homooligomer.

-! SUBGINIT: Homooligomer.

-! SUBCELLULAR LOCATION: Type II membrane protein.

-! TISSUE SPECIFICITY: Expressed on the surface of activated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      3 YENLONSRIEEKTQ--EPGKAPSQSFLWRILSWTHLLLFSLGLSLLLLVVVSVIGSQNSQ

After ligand binding to the receptor, the resulting complex is internalized and transported to a sorting organelle, where receptor and ligand are disassociated. The receptor then returns to the cell membrane
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    surface.
SUBJUNIT: The functioning ligand-binding unit of this receptor is SUBJUNIT: The functioning ligand-binding unit of this receptor is SUBGELULAR LOCATION: Type II membrane protein.
